Shrey Patel

AI Engineer

github.com/shrey-14
linkedin.com/in/shreypatel-ai

TECHNICAL SKILLS

Languages **Proficient**: Python, SQL
Experience: C, Java, HTML, CSS, Javascript
Tech Stack Git, TensorFlow, PyTorch, FastAPI, Tableau, PowerBI, OpenCV, Streamlit, React.js, Gradio

EXPERIENCE

Data Science Intern **Sep 2024 — May 2025**
Petpooja *Ahmedabad, India*

- Optimised 800+ BigQuery SQL pipelines supporting AI agent evaluation, cutting query latency by 30% and making experimentation noticeably faster.
- Designed and evaluated 100+ structured prompts for vision-language models, applying few-shot learning and prompt engineering to improve OCR accuracy by 15%.
- Developed and refined NLP pipelines for text extraction and validation using regex patterns and semantic matching, ensuring outputs remained clean and reliable.

PROJECTS

AI Radar - AI Intelligence Briefing Platform **May 2026 — Jun 2026**
Technologies Used: *Next.js, FastAPI, PostgreSQL/pgvector, Groq, Jina AI, Prefect, Supabase*

- Keeping up with the fast-moving AI landscape manually takes hours every day, so built an automated pipeline that scrapes, summarises and stores 260+ records across AI papers, news, tools and benchmarks everyday without any manual effort.
- Engineered a hybrid RAG system by combining semantic vector search with keyword matching using Reciprocal Rank Fusion, reaching Hit@1 of 100% on specific queries and added a confidence-gated fallback that automatically corrects wrong section routing.
- Deployed a production-grade full-stack application across Vercel, Railway and Supabase with a built-in LLM-as-judge evaluation framework that automatically grades summary quality on every pipeline run, maintaining and monitoring measurable content quality at scale.

EDUCATION

MSc in Artificial Intelligence, *Brunel University London, UK* Jan 2026 — Expected Apr 2027

BEng in Information Technology: 1st Class with Distinction, *LJ University, India* Nov 2021 — May 2025

ACHIEVEMENTS

AI Hackathon: Won 1st Prize Mar 2025

- Won 1st place in a company hackathon, designing and delivering an AI system for kitchen and inventory optimisation, demand forecasting, waste reduction, and recipe generation.
- Integrated LLaMA via Groq API for recipe generation, applying prompt engineering techniques to generate cooking instructions directly from ingredient lists.
- Refined model outputs using few-shot learning, maintaining consistency in recipe format and nutritional guidelines across varied inputs.
